

**Job Id:** VSAP021

**Job Title:** Principle Architect

**Job Type:** Full Time

**Job Location:** CA-Fremont

**Posted On:** 2019-08-29

---

**Job Description:**

Vertisystem, Inc. is seeking a highly qualified professional to fill the position of Principle Information Security and Infrastructure Architect based in Fremont, California. This position requires the ability to audit existing business global information infrastructures for security and infrastructure vulnerabilities, and the ability to form plans to harden existing topologies, including security monitoring, and risk management strategies to deal with evolving digital threats.

---

**Job Responsibilities:**

Responsibilities include designing, advocating and socializing highly sophisticated, hardened, global enterprise information security and infrastructure designs for a wide variety of global businesses. Additional responsibilities include providing direction and oversight, in close coordination with customers, of onshore and offshore resources who will be tasked with executing on approved designs which include oversight of daily work. This position also requires the ability to effectively communicate these plans and work closely with related business units to guide resulting remediation projects to a successful conclusion in a timely fashion. Direct daily operations of department, analyzing workflow, establishing priorities, developing standards and setting deadlines. Meet with department heads, managers, supervisors, vendors, and others, to solicit cooperation and resolve problems. Review project plans to plan and coordinate project activity. Assign and review the work of systems analysts, programmers, and other computer-related workers. Provide users with technical support for computer problems

---

**Required Skills:**

Skills needed for this position include mastery of ITIL, pre-sales soft skills, business analyst skills, project management skills, information security architecture skills, IT Infrastructure skills, the ability to design physical and virtual global networks, the ability to manage Cisco networking infrastructure, familiarity with IBM hardware platforms, a variety of hypervisor, and virtualization technologies. Ability to manage data centers and global IT infrastructure. The duties of this position regularly require national travel, approximately 50% of the time. This position requires a Master of Science in Information Technologies or equivalent degree in Computer Science, and ten (10) years of work experience in related occupations.
